Mr. Sathya V. Yalvigi
Project Director
Corporate Remediation Group
The Chemours Company
1007 Market Street
D-3084
Wilmington, DE 19899

Dear Mr. Yalvigi:

The United States Environmental Protection Agency (EPA) has completed its review of the Temporary Storage, Transportation, and Disposal (T & D) Plan for removal of lead and arsenic contaminated soil associated with the USS Lead Superfund Site. The following are EPA's comments on your T & D Plan:

- General Comment: Please provide how Chemours plans to provide documentation of the air monitoring and waste disposal activities.
- Section 1.1, paragraph 2. Please change the depth interval to 24 inches or greater, based on the sampling data.
- Section 2.2. Please modify Figure 1 and text to add the route for trucks leaving Zone 3.
- Section 2.3. Will you be staging hazardous and non-hazardous waste separately?
- Section 2.3. Please provide the name and RCRA identification number for each of the facilities that you plan to transport contaminated soil for disposal.
- Section 3.2. The storage piles should be covered when no transportation and disposal is occurring at the Chemours facility. Also stop work should be added to the list of potential dust control measures.

If you would like to have a conference call to discuss these comments, feel free to contact me at 312-886-7278.

Sincerely,

A handwritten signature in black ink, appearing to read "Th Alcamo", is written over the "Sincerely," line.

Thomas Alcamo
Chemical Engineer
